

## Implementing Web Application

Date	15 November 2022
Team ID	PNT2022TMID50125
Project Name	CONTAINMENT ZONE ALERTING

CREATE API IN FLASK :

```
from flask import Flask
app = Flask(__name__)
@app.route("/") def
homepage():
    return "Hello Flask!" if
__name__ == '__main__':    app.run()
```

The screenshot shows a Visual Studio Code editor window with a Python file named 'first.py'. The code in the file is:

```
1 from flask import Flask
2 app = Flask(__name__)
3 @app.route("/")
4 def homepage():
5     return "Hello Flask!"
6 if __name__ == '__main__':
7     app.run()
```

The terminal output at the bottom shows the command prompt running the application:

```
PS C:\Users\rickab> & "C:\Program Files\Python\Python.exe" "C:\Users\rickab\code\outsource\src\python\python_2023.08_Fyp\src\1st\first.py"
> Serving flask app 'first'
> Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
```

The status bar at the bottom indicates the file is 'first.py' in the 'src' directory, with a Python 3.10.10 interpreter and a 2023.08.08 date.
